ASC M1C

CONSTRUCTION GRADE SWEEPER

The ASC M1 C construction grade sweeper is Australia's biggest selling Industrial sweeper. It is specifically designed for use in the construction industry. Maintaining a clean and compliant construction site is no longer just a best practice—it's a legal and health imperative. With cement dust officially classified as a carcinogen under modern occupational health laws, the need for effective construction site cleaning equipment has never been greater. This is why ASC developed its range of cement compliant sweepers. They are purpose built to eliminate airborne dust and meet stringent EPA and WorkCover standards.

Whether you're managing a residential build, commercial development, or civil works project, ASC's dust control sweepers deliver the performance, protection and peace of mind your site demands.

The ASC M1C is a new class of fit for purpose industrial walk behind sweeper, designed to give the construction industry a fast, affordable, and highly effective solution for sweeping large scale projects.

It is available powered with a petrol engine (Honda) or battery. The electric version, which is extremely quiet and pollution free, is particularly suitable for indoor areas.

The ASC M1C has a sweeping path of 780 mm and boasts a working capacity close to 3.510 sq\m\h.

The most innovative feature of this machine outside its sweeping ability, is the manner in which it collects dust. Collected fine dust is filtered through a polyester bag filter (class S), which allows for an excellent filtering rate (99.9%) and is proven to last 9 times longer than traditional dust filtration systems used on traditional sweepers. This filter is easily cleaned thanks to an efficient mechanical shaker and should last 3 or more years without replacement.

FEATURES INCLUDE:

DUST SUPPRESSION SYSTEM

The dust suppression water misting system releases a fine mist across the floor before sweeping, reducing up to 99.9% of airborne dust particles.

FLAP LIFT DEVICE

The machine is equipped with a front flap lift device to allow for easier pick up of bulky debris.

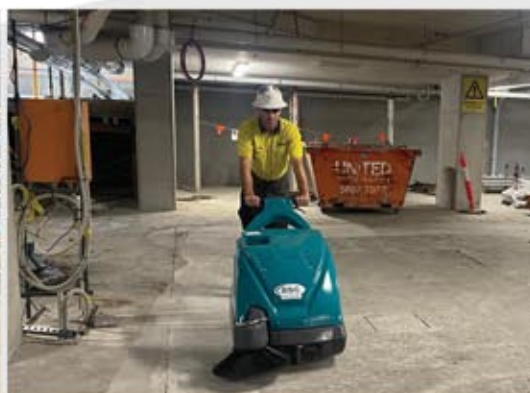

TRACTION

All ASC M1C walk behind sweepers are traction driven via a comfortable hand lever positioned on the operator's handle. With this design, operating the machines is effortless.

ADJUSTABLE HANDLE

The adjustable handle allows for better ergonomics and greater manoeuvrability, as it can be adapted to the height of the operator.

REAR MOUNTED HOPPER

The rear hopper means greater filling capacity. In fact, the filling of the hopper is similar to that of a lawn mower where you can fully fill the hopper before emptying. The hopper is mounted on wheels to eliminate any strain on an operator's back when emptying. Additionally, the hopper and frame are made from solid steel ensuring long life.

SIMPLE CONTROL PANEL

The dashboard, located on the hood, is very simple to use. A 35 second training course is all that is required to operate this extremely efficient machine.

POLYESTER BAG FILTER

The polyester bag filter (class S) allows for an excellent filtering rate (99.9%) and has a much longer lasting life than traditional paper filters that block quickly and blow dust. The filter can be cleaned easily thanks to an efficient mechanical shaker, adding to its long life. The bag filter on the ASC M1C outperforms conventional sweepers for dust control 8 to 1, assuring dust free sweeping no matter how dusty the area.
